

Report

Of

UI/UX Design and Website Testing

at Artiscien Software Solutions

Submitted To

School of Computer Science and Engineering
IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement of degree of

B.Tech CSE

By

Roll Number of Student: **CS-2341512**

Name of Student: **VRIDDHI GUPTA**

Batch: **2026-27**

Organisation of Internship:

Artiscien Software Solutions Private Limited

Bangalore, Karnataka

CANDIDATE'S DECLARATION

I, Vriddhi Gupta do hereby declare that the internship report titled “**UI/UX Design and Website Testing at Artiscien Software Solutions**” has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in CSE. All the references have been quoted and I have not taken as such any material from any other source. I affirm to you that this report is my own and has not been submitted to any other institute for any degree/diploma requirement and further I shall be solely responsible for any kind of copyright violation in this regard.

Student Name: Vriddhi Gupta
Roll No.: CS-2341512

ACKNOWLEDGEMENT

I am using this opportunity to express my gratitude to everyone who supported me throughout the Internship Program. I am thankful for their aspiring guidance, invaluable constructive criticism and friendly advice during this work. I am sincerely grateful to them for sharing their truthful and illuminating views on a number of issues related to this work. I am especially thankful to Artiscien Software Solutions for giving me the opportunity to work on website testing, graphic design and UI/UX design.

I express my gratitude to my parents for their blessings.

INTERNSHIP COMPLETION CERTIFICATE

Artiscien Software Solutions Private Limited

INTERNSHIP COMPLETION CERTIFICATE

This is to certify that

VRIDDHI GUPTA

D/o Vishal Gupta

has successfully completed a three-month internship with

ARTISCIENT SOFTWARE SOLUTIONS

in the role of

INTERN - WEBSITE TESTING, GRAPHIC DESIGN & UI/UX DESIGN

from 1st June 2026 to 31st August 2026.

During the internship, she gained practical exposure and contributed to activities related to website testing and quality assurance, graphic design, UI/UX design, usability improvements, and software/web application design workflows.

We appreciate her efforts and contribution during the internship and wish her success in her future academic and professional endeavours.

Date of Issue: 31st August 2026

4. PROJECT DESCRIPTION

4.1 Introduction

A company's website is often the first place where a client meets the organisation, so it must look consistent, read clearly and respond correctly. In a web project, designers prepare the interface in a tool such as Figma and developers then build it in code; small differences between the approved design and the released page are common, and finding them is the purpose of design review and website testing.

This report documents a three-month internship (1 June 2026 to 31 August 2026) at Artiscien Software Solutions Private Limited, Bangalore, in the role of *Intern – Website Testing, Graphic Design & UI/UX Design*, carried out online. My main assignment was to find bugs and improvements on <https://artiscien.com> by comparing it with the Figma design supplied by the company. The Home, Services, Industry, Resources and About Us pages were reviewed, and the findings were recorded in an Excel workbook of 16 defects and 16 UI improvement suggestions. I also supported graphic design work, including a LinkedIn carousel post for the company.

4.2 Organization Profile

Artiscien Software Solutions Private Limited (CIN U72900KA2016PTC097265) is a technology and business solutions company focused on providing digital solutions and services to businesses, located at Plot/Villa-296, Phase 1, Vakil Whispering Wood, Anekal, Bangalore, Karnataka – 562106 (contact@artiscien.com). Its website [2] presents the company as a guide for organisations preparing for AI adoption, with pages for services, industries and resources. As stated in the offer letter, the internship covered website testing and quality-assurance support, graphic design tasks for digital and branding material, contribution to UI/UX design, and collaboration with the team on usability enhancements. In line with the confidentiality expected, this report uses only observations on the public website and my own work products.

4.3 Problem Statement

The problem addressed was the gap between the approved UI/UX design of the Artiscien website and its live implementation. It appears in four forms: (i) **design fidelity**, where layout, spacing and images drift from Figma; (ii) **content correctness**, such as repeated cards, placeholder text and empty pages; (iii) **functional behaviour**, such as a tab that does not respond; and (iv) **usability and visual comfort**, such as over-saturated colours and unbalanced panels. A systematic page-by-page comparison

was needed, with every finding documented clearly enough for the team to reproduce and correct it.

4.4 Project Objectives

1. To review the website interfaces against the approved Figma designs (UI/UX review).
2. To identify visual, content, functional and interaction issues on every page (website testing).
3. To document each issue with a unique ID, page name and description (defect documentation).
4. To suggest practical improvements to usability, consistency and visual hierarchy.
5. To support graphic design tasks for digital and branding material.
6. To maintain a structured Excel report the team can use to resolve the issues.

4.5 Scope of the Project

The scope covered UI/UX review and website testing of five page groups (Table 4.1) and graphic design support. Fixing the issues in the website code was the development team's responsibility; automated, performance and security testing were not part of the assignment.

Table 4.1 Website pages reviewed, with defects and suggestions logged

Page	Main areas examined	Defects	Suggestions
Home Page	Hero banner, Featured Industry tiles, process steps, testimonials, footer	4	3
Services Page	Service navigation panel and content panel	0	2
Industry Page	Overview and infographic, industry tiles, case studies, video	4	4
Resources Page	Tabs and filters, resource cards, Success Stories, Templates	5	4
About Us Page	Hero section, mission, vision and values, footer icons	3	3
Total		16	16

4.6 Technologies and Tools Used

Table 4.2 Tools and technologies used

Tool	Purpose in the internship
Figma [1]	Reviewing the approved UI/UX designs used as the reference
Web browser (live website)	Testing layout, content, navigation and interactive behaviour
Browser Developer Tools [5]	Inspecting elements, spacing and text to confirm differences
Microsoft Excel [7]	Recording defects and suggestions in a two-sheet workbook
Adobe Photoshop [8]	Image editing and graphic design work
Canva [9]	Design creation and visual content for branding material

4.7 System Architecture (Testing Workflow)

Instead of a software architecture, the core technical artefact of this internship is the testing workflow in Figure 4.1. The approved Figma design and the live page are compared section by section; each difference is categorised, given an ID (for example HOME-001, IND-001, RES-001, ABOUT-001), recorded in Excel, and complemented by separate UI improvement suggestions (UIS-001 onwards).

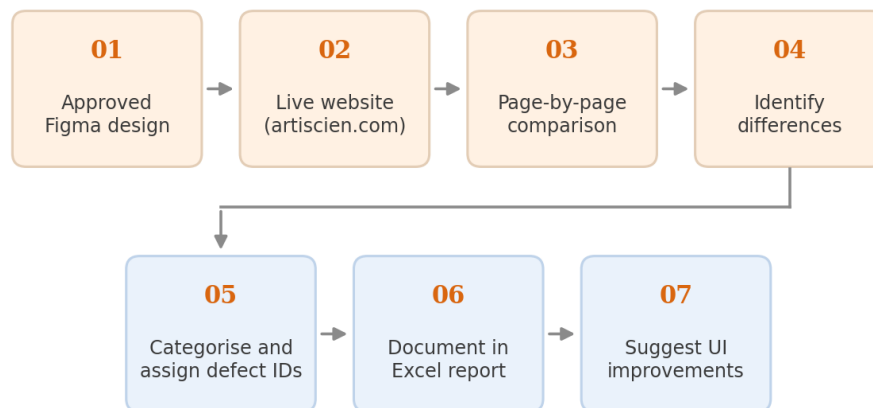

Figure 4.1 Figma-to-live website testing workflow

4.8 Methodology

Every page was reviewed in six phases (Table 4.3). The review judged findings against accepted principles: consistency with the product's own design [4] and sufficient text contrast for readability [3].

Table 4.3 Testing and review methodology

Phase	Activity
1. Understand	Study the approved Figma design: layout, components, hierarchy, typography, spacing and imagery
2. Explore	Navigate the matching live page as a user would
3. Compare	Compare both versions section by section, including buttons, tabs and cards
4. Identify	Record differences and functional problems as defects; keep design-matching improvements as suggestions
5. Document	Assign a unique defect ID and enter page, short and detailed description in Excel [6]
6. Recommend	Write UI improvement suggestions with a reason and proposed direction

4.9 Expected Outcomes

The internship produced a structured Figma-versus-live comparison of five page groups. The 16 defects fall into five kinds: six layout and alignment mismatches, five content problems (repeated cards, placeholder numbering, Lorem Ipsum text), two readability and contrast issues, two pages with missing content, and one non-functional tab. The full logs are given in Tables 4.4 and 4.5 (detailed descriptions are in the Excel report).

Table 4.4 Defect log: Figma versus live website

ID	Page	Defect
HOME-001	Homepage	Hero Banner Text Visibility Issue
HOME-002	Homepage	Industry Cards Not Matching Figma Design
HOME-003	Homepage	Low Visibility of Process Step Numbers
HOME-004	Homepage	Duplicate Testimonial Content
IND-001	Industry Page	Industry Overview Section Not Matching Figma Layout
IND-002	Industry Page	Featured Industry Tiles Previously Displayed Incorrect Content
IND-003	Industry Page	Featured Case Studies Title Overflow
IND-004	Industry Page	Featured Case Studies Title Overflow
RES-001	Resources Page	Short Videos Tab Not Functional
RES-002	Resources Page	Success Stories Page Missing Content
RES-003	Resources Page	Template Download Page Missing Content
RES-004	Resources Page	Case Study Titles Contain Placeholder Numbering
RES-005	Resources Page	Placeholder Lorem Ipsum Content Displayed
ABOUT-001	About Page	Hero Section Content Misalignment
ABOUT-002	About Page	Hero Image Position Not Matching Design
ABOUT-003	About Page	Heading and Content Spacing Inconsistent

The 16 UI improvement suggestions fall into six themes. The largest, with six suggestions, is a softer shade of orange for active states (hero, selected cards, footer, navigation and filter button). Another six concern layout balance and alignment; the remaining four cover card spacing, empty-state design, video playback and official social-media colours.

Table 4.5 UI improvement suggestion log

ID	Page	Suggestion
UIS-001	Homepage	Excessive Visual Intensity in Hero Section
UIS-002	Homepage	Active Service Card Highlight Too Prominent
UIS-003	Homepage	Excessive Footer Color Saturation
UIS-004	Service Page	Active Navigation Card Uses Strong Visual Emphasis
UIS-005	Service Page	Uneven Visual Balance Between Navigation and Content Panels
UIS-006	Industry Page	Pie Chart Information Card Positioning
UIS-007	Industry Page	Featured Industry Card Selection Indicator
UIS-008	Industry Page	Case Study Video Interaction
UIS-009	Industry Page	Industry Overview Visual Balance
UIS-0010	Resources Page	Active Filter Button Contrast
UIS-0011	Resources Page	Resource Card Content Spacing
UIS-0012	Resources Page	Filter Section Alignment
UIS-0013	Resources Page	Empty State Design
UIS-0014	About Page	Improve Content Vertical Alignment
UIS-0015	About Page	Optimize Hero Section Whitespace
UIS-0016	About Page	Use Official Social Media Brand Colors

Through this work I improved my understanding of design consistency, learned to test a website systematically and to describe visual, content and functional defects clearly, and gained experience of communicating design issues professionally on a real business website. As part of the graphic design work I also designed a LinkedIn carousel post for the company.

4.10 Certificates of completion and other communication mail proof

The offer letter issued by Artiscien Software Solutions (Figure 4.2) confirms the internship in Website Testing Support, Graphic Design and UI/UX Design from 1 June

2026 for three months. I affirm that the document is genuine and was obtained in the normal course of the internship.
